

HxGN EAM

An industry-leading platform that evolves Enterprise Asset Management (EAM) into Asset Performance Management (APM)

Progressive TSL understands the pain points that asset-intensive businesses face, we know how critical it is for your company to maximise the benefits whilst minimising costs.

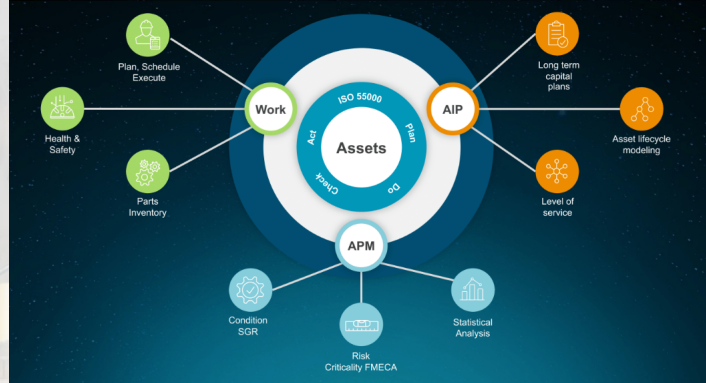

That is why we have developed a template EAM configuration providing best practice industry functionality for all aspects of asset management. We also have ready-built interfaces from EAM to SunSystems and other companion products.

Why choose an EAM solution?

- Easy to search inventory – full view of all stock across all locations
- Material Replenishment Processing (MRP) – the automated ordering of critical spares and equipment reducing unnecessary manual ordering and waiting at a time when you need them.
- Single, real-time view of assets – so that you can make better decisions on purchases, repairs and renewals.
- Fully scalable and highly adaptable to workflows – as your business grows or changes, so will the solution.
- Makes use of handheld technology – to support mobile working practices
- Track and manage all assets – complete access to all your assets means that you can maintain what you have while quickly purchasing anything else that your business requires. You can also see how much time is spent on asset maintenance to decide on updates or upgrades to equipment.

Included in HxGN EAM

Vision on Asset Performance Management

Business-critical Features:

- Full integration with your existing finance system
- Total visibility in one system of multiple business entities
