

Implement the Maximo® Application Suite with Progressive TSL

IBM Maximo® Business Partners, Progressive TSL are enterprise asset management (EAM) specialists. Progressive are EAM implementation experts, working specifically with asset-intensive industries including energy, mining, utilities, transport and engineering services.

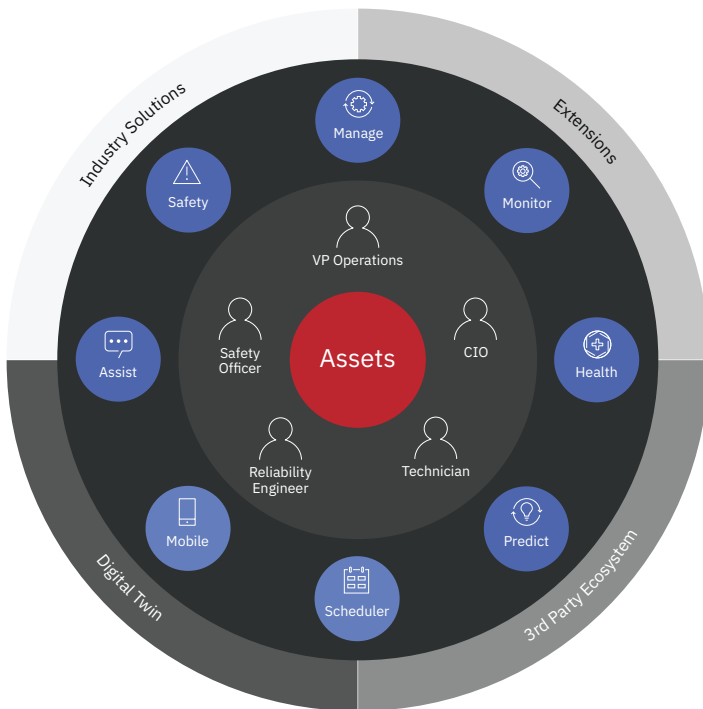

Monitor, manage and maintain your assets in a single platform

Maximo® provides the capabilities for better managing physical infrastructure assets, so you can make better decisions around all aspects of asset management and get insights that deliver ongoing value for your organisation.

- Increase production uptime with more accurate alerts and anomaly detection
- Analyse data with AI to go from reactive to predictive maintenance
- Empower field technicians with the right asset data and increase first-time fix rates
- Use just the applications you need with simplified licensing and usage
- Enjoy flexible deployment models, whether on-premises or multi-cloud
- A suite of asset management applications in pursuit of 'Zero D' - zero defects and zero downtime.

The Maximo® Application Suite

Maximo® Manage (CMMS/EAM)

Reduce downtime and costs by optimising asset management and maintenance processes to improve operational performance. Unify asset management processes using role-based workspaces to help teams across your enterprise. Maximo® Manage unifies robust asset life cycle and maintenance management activities, providing insight into all enterprise assets, their conditions and work processes to achieve better planning and control.

Progressive and Maximo®

Progressive TSL are IBM Gold Business Partners - this recognises their industry experience and specialist Maximo® expertise. Wherever you are on your IBM Maximo® journey, Progressive are there to support you - helping you to streamline your asset management processes, improve efficiency and gain information transparency for better operational decision making.

Maximo® Monitor

Improve asset and operational availability with advanced AI-powered remote asset monitoring at scale. Collect data from your existing systems and converge your IT and operational systems in a single data lake to detect anomalies.

Maximo® Visual Inspection

Perform a visual inspection of the line or asset using commercial, off-the-shelf iOS devices to get immediate, actionable notifications of any emerging issue. Integrate with maintenance and quality workflows for fast and prescriptive responses.

Maximo® Health

Manage the health of your assets using IoT data from asset sensors, asset records and work history to increase asset availability and improve replacement planning. Get an accurate view of asset health via dashboard displays to provide evidence to base operational decisions.

Maximo® Predict

Go beyond time-scheduled maintenance to condition-based action to predict the likelihood of future failures by applying machine learning and data analytics to reduce cost and asset failures.

Maximo® Mobile

Built on next-generation mobile technology, Maximo® Mobile boosts productivity by giving field technicians the power to easily navigate a single, intuitive platform and find the right asset history and operational data.
