Top reasons to upgrade to Infor SunSystems Cloud

The new release of Infor® SunSystems Cloud offers advanced tools that enable you to work faster, more flexibly, and more efficiently. Demonstrating Infor's commitment to designing innovative solutions, we continue to make significant investments in the development and new functionality of our applications. We help our customers solve their toughest business challenges with a secure and reliable platform that enables quick responses to opportunities, regulations, and innovation.

With cloud-based software, you can focus on the work you do best, letting the pros handle the tech side of things. Your trusted cloud partner will handle back-ups, upgrades, and security, so your mission-critical systems and data stay up-to-date and safe. Plus, you get new solutions deployed quickly with the flexibility to add new applications as needed.

More than just a modern financial system, SunSystems® in a cloud environment delivers improved collaboration, security, and a lower total cost of ownership.

Get current

If you're currently running Infor SunSystems v6 (or older) you should consider migrating to the latest release to keep your systems current, benefit from automated updates to get the latest releases immediately, improve disaster recovery with less potential downtime, optimize performance with automated hardware scaling, and enjoy more automation and integrations for faster deployments.

Go global

With localizations and new features for collaboration, you get a strong, flexible finance model capable of supporting global enterprise growth. Infor provides visibility across all areas of your business and allows you to more easily meet local reporting requirements.

Focus on what you do best

With cloud-based software, you get new solutions deployed quickly, as well as the ability to add new applications as needed. Because your partner handles backups, upgrades, and security, all of your critical systems and data remains secure.

Improve collaboration

Collaboration is a cornerstone of most successful businesses. With the virtual nature of today's workforce, it has become even more important. You may have team members, partners, investors, or subcontractors spread out across all over the country and even all over the world. Even if your workforce is all local, they expect to be able to work anytime and from anywhere. Give them the digital solutions to do just that.

Keep employees engaged

To support your efforts to find and retain top talent, technology must be seen by your employees as an asset, rather than an obstacle. Software that looks better generally works better, which boosts productivity, increases user satisfaction, and improves decision-making. This isn't to suggest that you should choose good-looking software that doesn't serve your needs. You no longer have to sacrifice usability for functionality. You can have the best of both worlds with modern digital solutions.

Lower total cost of ownership

By moving to the Infor Cloud, you'll be able to reduce the burden of managing your on-premises environment, increase security, and reduce operational costs.

Make upgrades nearly seamless

With a cloud-based solution, you can streamline your IT operations and reduce your need to manage a complex IT infrastructure, such as applying patches and performing regression testing. Infor manages the environment for you and provides automated tooling for transitioning to the next current release.

Modernize finance capabilities

Next-generation capabilities allow you to better address key pain points within your finance, accounting, and procurement operations with complete integration and near-real time analytics across your entire operational platform. These capabilities include world-class budgeting and planning tightly integrated with finance functions. SunSystems automates key processes, such as accounts payable and invoice processing. The solution features enhanced business process workflows and collaboration. With a seamless user experience, SunSystems is easier to use and deploy.

Features and benefits delivered by SunSystems Cloud

Every aspect of SunSystems has been improved, modernized, and simplified.

From design to production, an easy-to-use environment

- Experience modern intuitive navigation
- Create real-time queries and drill back to the source transaction
- Easily find relevant information and get that data delivered automatically
- Reduce training time and increase productivity

Get business insights through a variety of channels

- Leverage robust embedded business intelligence tools
- Conduct sophisticated analytics with web dashboards and a self-service front-end
- Take advantage of real-time data integration with Infor Query and Analysis, a Microsoft Excel-based tool
- Enjoy an improved centralization of data

Easily integrate with other Infor and third-party solutions

- Manage cross-application workflows and event management
- Get deeper insight across application process flows
- Improve proactive, preemptive control
- Seamlessly integrate your business applications to eliminate operational silos

Secured access to SunSystems documents across the ecosystem

- Attach documents directly to the related transactions with Infor Document Management (IDM)
- Automatically capture, authorize, and archive any kind of business document contextually
- Search and retrieve those documents whenever they are required
- Save time, money, and storage space, as well as comply with increasing regulations
- Allow customers, suppliers, and employees to access and interact with the core SunSystems solution via the external web portal
- Leverage self-service capabilities
- Reduce internal administration and limit the number of queries

Improve processes between entities and systems

- Apply amendments to the primary entity to all specified secondary entities
- Leverage improved process efficiency
- Reduce re-keying errors
- Flexibly configure currencies according to your reporting and analysis needs
- Support five currencies per transaction
- Record transactions and provide reporting and analysis in different currencies
- Store and report on a further ten attributes associated with a “T” code
- Report analysis codes with Infor Query and Analysis for SunSystems

Experience more than just a financial system
